

NIREY ELECTRIC KNIFE SHARPENER SPARE PARTS & ACCESSORIES

COMMERCIAL MODEL KE-280 and PROFESSIONAL MODEL KE-3000

The KE-280 and KE-3000 electric knife sharpening machines use aluminium-oxide continuous abrasive belts. Aluminium-oxide is extremely hard for long lasting qualities. Even more important, it cuts cold, meaning that little heat is generated when in contact with the knife steel. Less expensive silica based abrasives create considerable friction heat - with the danger of reaching temperatures that could de-temper the knife steel.

SHARPENING ABRASIVES

Each machine comes equipped with a pair of fine abrasive belts fitted on carrier wheels. Other abrasives available are medium and coarse grit. You may need to use heavier duty abrasives depending on the steel quality and condition of your knife. Abrasives are also available already fitted on carrier wheels which enable a quick and easy changeover between grades.

CARRIER WHEELS FITTED WITH ABRASIVE

(supplied in pairs)

- Coarse (150 Grit)
- Medium (240 Grit)
- Fine (320 Grit)

REPLACEMENT ABRASIVE BELTS (supplied in pairs)

- Coarse (150 Grit)
- Medium (240 Grit)
- Fine (320 Grit)
